

Adempiere, the ideal solution

One of the most relevant features of Adempiere is that it was thought out having all parameters required for any software that is trying to cover the needs that bussiness world demand. Being based on the concept of "Bussiness process", ,unlike the majority of ERP in the market that are module concept based, Adempiere works in a more logically way

With Adempiere your business will be able to manage resources, finances, customers and providers in a consistent and effective way due to the integrity of features of the Software. Since Adempiere is a unitary system , integrated and complete, it provides unified information of the business,including every area . This allows you to have a complete control over your company.

Adempiere allows you to control each aspect of the application and at the same time you can update , add new features to Adempiere to adjust to any need of your business and the market requierement.

In Adempiere the integration is apply to CRM (Customer Relationship Management), Web Store as well as ERP (Enterprise Resource Planning).

The flexible model of Adempiere ERP & CRM, allows work flows, documents and transactions to be adaptable to any need of your business, in contrast with traditional software , in which you have to adapt your business to the software.

ERP & CRM were designed thinking in the actual market demand, with features such as multi-currency, multi-language, multi-organization, multi-accounting, multi-costing and multi-taxes . Since all of these features were implanted from the beginning , adempiere posseses a big stability with a parametrization that covers all the requirements of any business.
