

Adempiere

Carlos Ruiz, General manager of GlobalQSS, is one of the 9 founders of Adempiere project . Currently, he is working as "Head of Project Management Committee ". Adempiere is an open source code program that integrates ERP1 & CRM2 in one powerful tool. Adempiere is the perfect solution for any kind of company including small and multinational corporations which need an expansion in the international market. Since Adempiere is an open source code program implemented by an international community and developed with a last generation language , it is completely flexible to any need of any company, adaptable to a changeable market and its constant updates assures the establiity and performance of the product ; ensuring a constant participation in the actual market and future.

Since its initial conception, Adempiere was designed multi-currency, multi-language, multi-organization, multi-accounting, multi-costing and multi-taxes . This capabilities make adempiere able to adapt to any kind of need, after all, it was thought out having all possibilities required for any company in mind. Adempiere is based on ADD3 which makes it a good choice when data managing, constructing , and accessing information found in the layer of meta-data. Having been written completely in java , using J2EE technology with an application server based on JBOSS, Adempiere can be used in any platform , such as : Linux, Unix, Windows, Mac, etc. _____ 1ERP (Enterprise Resource Planning)

2CRM (Customer Relationship Management) Administración de Relación con el Cliente.
